DATE OF INCIDENT: 9/24/2022

DESCRIPTION OF INCIDENT:

Rotorcraft declared an emergency due to smoke in the cockpit and partial loss of engine control. Helicopter made a hard landing, went off the runway and the gear collapsed.

Per NTSB Report:

"The inflight loss of collective control of the helicopter due to thermal damage of a collective control torque tube that abraded with misrouted electrical wiring, which resulted in an electrical short and inflight fire.

Contributing to the accident were the incorrectly manufactured wiring support strip assembly that misrouted electrical wires near the collective control torque tube, the ambiguity of the support strip assembly drawing that allowed for its incorrect manufacturing, the inadequate quality control processes to identify the incorrectly manufactured support strip assembly, and the helicopter manufacturer's inadequate assembly instructions that allowed the misrouting of the electrical wiring, due to the incorrectly manufactured strip assembly, on the helicopter production line."
